Students making normal progress who would like funding for mathematical travel (attending a conference, for example) can draw on several resources:

**Grants**

If the student has access to grant money that provides travel support, this should be used first.

**Adviser**

The student's adviser might have grant money available for grad student travel: ask your adviser!

**Graduate and Professional Student Senate**

The UW GPSS (Graduate and Professional Student Senate) has some travel funds available if you are presenting a talk or a poster: up to $300 for domestic airfare, $500 for international. Note the deadlines on their page. You should apply directly to them.

**UW Graduate School**

The UW Graduate School has some funding available if you are presenting a talk or a poster: up to $300 for domestic airfare, $500 for international. Note the deadlines on their page. Also, these funds can only be used for transportation: not lodging, conference fees, etc. To apply, contact the Mathematics GPC with the following information: where you're going, the title of your presentation, and how much money you're requesting.

**Department of Mathematics**

The Department of Mathematics also has some funding available. To apply, contact the Mathematics GPC with the following information: where you're going, whether you're giving a presentation (funds are available whether you are or not), and how much money you're requesting. Your advisor should also write a brief letter of support to the GPC. Currently, we can provide funding for transportation, lodging, and registration fees, but not food.
